

Assignment

A big string is given and an array of small strings also, all of which are smaller in length than the big string. The task is to create an array of booleans, where each boolean represents whether the small string at that index in the array of small strings is contained in the big string.

Input :

bigString = "this is a big string",

smallStrings = ["this", "yo", "is", "a", "bigger", "string", "kappa"]

Output : [true, false, true, true, false, true, false]

Input : bigString = "Mary goes to the shopping center every week.",

smallStrings = ["to", "Mary", "centers", "shop", "shopping", "string", "kappa"]

Output : [true, true, false, true, true, false, false]
